Education

Pune Institute of Computer Technology

Bachelor of Engineering in Computer Engineering (CGPA: 9.36 / 10)

Jun 2020 – Jun 2024

Pune, Maharashtra

Experience

UBS

Software Engineer

Aug 2024 - Present

Pune, Maharashtra

- Integrated firmwide document classification and protection services into report workflows using OAuth token exchange, mTLS, and internal data-sensitivity APIs to meet regulatory requirements.
- Re-architected report classification and protection from synchronous to asynchronous processing after tracing intermittent download failures to the 55-second API Gateway timeout, introducing job tracking, status polling, and deferred downloads.
- Designed an event-driven file processing pipeline for **20+ operation types**, connecting Azure Blob Storage, Event Grid, Event Hub, Azure Functions, and Spring Batch to route heterogeneous broker records to operation-specific handlers.
- Introduced an annotation-driven handler model for operation-specific business rules, with shared record mapping, entity resolution, and configurable missing-data policies, allowing new operations to be added independently of the ingestion pipeline.
- Optimized batch validation by caching static reference data in memory, reducing database lookups from **N×M to M per file**.
- Established a reusable FX-rate synchronization service using Spring Batch, Azure Functions, and internal SOAP-based MAP services, feeding FX data into downstream reporting and driving user-selected currency views in AUM.
- Replaced recurring Liquibase data migrations with Spring Boot APIs and an admin portal to manage Life Insurance company and product configuration.

Quoppo

Software Engineer Intern

Jan 2024 - Jul 2024

Pune, Maharashtra

- Developed Node.js and Express.js APIs for a centralized subscription and payment platform used by multiple SaaS products, supporting one-off, unit-based, and recurring billing with PostgreSQL and Prisma.
- Connected Lago billing with Adyen payments through webhook-driven transaction handling, synchronizing successful and failed payment events across billing and application systems.
- Extended Automerge's network adapter to intercept synchronized collaborative chat messages for MongoDB persistence, while adding image sharing through Cloudflare R2 using the existing CRDT communication layer.

Projects

TunnelWay | Go, WebSockets, HTTP | GitHub

- Developed a reverse HTTP tunneling system that exposes local services through public subdomains using persistent outbound WebSocket connections, routing traffic to services behind NAT or firewalls.
- Implemented binary request/response framing with request correlation and streamed body chunks, handling concurrent request multiplexing and streaming without buffering complete request bodies.

V2Data | Java, Spring Boot, Cloudflare Workers AI | GitHub

- Created an asynchronous REST service for audio upload, transcription, and structured note generation with JWT authentication and email verification.
- Integrated Cloudflare Workers AI for speech-to-text and LLM-powered note generation, using Spring application events to decouple long-running processing from API requests.

Technical Skills

Languages: Java, Go, Python, TypeScript, JavaScript, SQL

Backend: Spring Boot, Spring Batch, REST APIs, Node.js, Express.js, Flask

Cloud & Infrastructure: Azure Functions, Azure Blob Storage, Azure Event Grid, Azure Event Hub, Ansible, Docker

Databases & Systems: PostgreSQL, MongoDB, WebSockets, Event-Driven Architecture, Distributed Systems

Tools: Git, GitLab CI/CD, GitHub Actions, Liquibase
